

REDECAMGROUP

AIR POLLUTION CONTROL LEADER

Redecam offers highly engineered turnkey air filtration and flue gas treatment (FGT) solutions, helping customers worldwide meet their air emission reduction targets rapidly and cost-effectively. We have a strong track record with over 2,000 projects in nearly 90 countries and on every continent.

Thirty years of innovation and R&D have led us to design systems, ideal for the steel and iron industries, that not only outlast the competition but that offer the highest particulate and contaminant removal available. Many of our installations operate well below the world's strictest emissions requirements.

We also specialize in customized retrofit, transformation and upgrade systems, which use your existing equipment's casing and parts and offer you a cost-effective solution with a quick turnaround while ensuring complete emissions legislation compliance. Redecam's complete portfolio of air pollution control systems includes:

AIR FILTRATION

- Bag Filters (baghouses)
- Electrostatic Precipitators
- Dual-Action Filters
- Extreme High Temperature Filters
- Multi-Input Integrated Systems

FLUE GAS TREATMENT

- DeNO_x (Selective Catalytic Reduction (SCR), Selective Non-Catalytic Reduction (SNCR), Hybrid (SCR/SNCR), Catalytic bags)
- Mercury Adsorption System
- Dry Injection Desulfurization

We also offer a wide variety of market-leading gas conditioning systems and handling & storage products as well as a full line of technical support & services.

The right partner. The right solution. The right choice.
